Description			
<ul style="list-style-type: none">• but would not want to propagate them for hierarchical tables (plantname, namedplace), because each level should be seen as independent although it's linked in the schema<ul style="list-style-type: none">◦ to filter this case, add the following near the end of sql_io.py put_table():			
<pre>srcs = filter(lambda v: v.name != 'parent_id', sql_gen.cols_srcs(in_cols)) # don't propagate srcs in hierarchies</pre>
