<b>Remote sensing of global biodiversity</b> Write perspectives paper <b>Working Groups</b> <b>BIEN 3</b> CSV-XML-database mapping script VegBank metadata query mechanism mapping inversion script Try to find source of DwCA (DwC Archives) (...) TurboVeg data Mapping from VegBIEN to original VegBank Import TurboVeg data get raw data rather than flat file exports (...) make website user-protected have "schema showdown" create verbal descriptions of edge cases add georeferencing support to schema make ERD of full schema create automated feedback mechanism convert VegBank data dictionary to database (...) count how many duplicates between Canadensys (...) Finish translating XML functions to (...) aggregating validations of imports fix deadlock in INSERT IGNORE replacement timeout ANALYZE queries optimize JOINS on existing rows cast all untyped literals as text using (...) verify database contents as part of (...) cluster vegbien tables periodically	<b>Remote sensing of global biodiversity</b> New 0%  <b>BIEN 3</b>																								

test that querying the DB uses the unique (...)  
use driver-native autocommit mode instead (...)  
data provider feedback: propagate srcs (...)  
don't display warning when nullable (...)  
move issue tracker comments to wiki (...)  
underline all to do items in meetings (...)  
give everyone their own account on vegbien  
develop map spreadsheet -> header override (...)  
translate README.TXT to wiki page  
track data provider's citation requirements (...)  
add unit-conversion mechanism  
change import.stats.xls to use field (...)  
when lower rank has name concatenated (...)  
fix deadlock when multiple testers (...)  
integrate creation of analytical DB (...)  
remove benign errors from the data provider (...)  
move VegCore data dictionary to a phpPgAdmin-accessible (...)  
make VegBIEN ID fields plain-text instead (...)  
flatten the mappings  
refactor VegBIEN to use VegCore terms  
make all VegBIEN column names globally (...)  
automatically adjust staging tables (...)  
automap the analytical DB columns  
mechanism to manually override the CSV (...)  
put all wiki attachments in svn  
merge the datasources' mappings into (...)  
replace all fields of type text with (...)  
in sql\_gen.EnsureNotNull, use ARRAY[] (...)  
automap each word \*in\* a VegCore term (...)  
mechanism to dynamically autopopulate (...)  
support TNRS-matching names in "", insted (...)  
autodetect column mismatches  
rename columns by name, not position  
auto-prepend table name to columns

<p>re-run TNRS on mis-scrubbed names  make tests use their own public schema  data provider feedback tables: include (...)  standardize taxon ranks to a common (...)  fix slowness in _taxonlabel_set_parent_id()  remove dependencies on the development (...)      enable schema changes to be made (...)      move test DB to vegbiendev VM  grant bien_read access to publishable (...)  grant bien_read access to validation (...)  fix crow's foot notation in ERD  remove dependencies on Mac  schedule regular pg_dump backups of (...)  generate the source-general derived (...)  in aggregating validations pipeline, (...)  switch to new TNRS setup      Taxon name validation: VegBank      TNRS: Instructions for new version (...)      Taxon Name Validation          Enquist's taxon validation  change TNRS client to store metadata  BIEN db at iPlant  Discovering BIEN data through iPlant  Data Dictionary  in TNRS client, detect Internal Server (...)  fix missing date fields  in TNRS, the Constrain by Source option (...)  fix phpPgAdmin bug that crashes the (...)  incorrect synonym being selected in (...)  update the column names in the VegBIEN (...)  have all scripts that replace DB items (...)  fix shortened view_full_occurrence_individual (...)  refresh GBIF so it can be published  CVS and VegBank data</p>	<p><b>New 60%</b>  <b>New 60%</b></p> <p><b>New 70%</b></p>
